BIAT Security and Fraud Prevention.

BIAT will never ask for your password. Bank staff will never ask, by phone, SMS, email or in person, for your BIAT Net password, your card PIN, or a one-time code sent to your phone. Any such request is fraud. End the call and report it.

Phishing. Fraudulent messages imitate BIAT and ask you to click a link to unblock your account or confirm a payment. Check the sender, never open links in unexpected messages, and reach BIAT Net only through the official app or by typing the address yourself. BIAT never sends links that ask you to log in.

Card safety. Cover the keypad when entering your PIN. Never write your PIN on the card or keep it with the card. Inspect an ATM for anything unusual around the card slot or the keypad, and prefer ATMs inside branches. Enable payment notifications in the app so every transaction alerts you immediately.

If you suspect fraud. Block the card immediately in the BIAT Net app, which is instant and reversible, or call the 24/7 opposition line. Then report the disputed transactions at your branch within 13 months, or within 70 days for transactions outside the country. A card blocked by mistake can be unblocked in the app.

Liability. Transactions made before you report a lost, stolen or misused card are your responsibility up to a limit of 150 dinars, unless you acted fraudulently or with gross negligence, such as writing the PIN on the card. After you report it, you are not liable for further transactions.

Strong authentication. Online card payments require confirmation in the BIAT Net app or a one-time SMS code. Never share that code, even with someone who says they are from the bank.
